📜 CERTIFICATES

Android Application Development
from udacity

Full-stack Development
from evangadi

PROJECTS

Amazon Clone

A full-stack e-commerce clone with React, Stripe, and FakeStoreAPI. This project includes user authentication, product catalog, shopping cart, and secure payment processing with Stripe integration. Built with modern React patterns and Firebase for backend services.

SRMS

node,express,MongoDB

A comprehensive student record management system that generates certificates for each student and provides detailed yearly statistical reports. Features include admin dashboard, student profiling, automated certificate generation, and data analytics with visual charts.

Chapa Payment E-commerce

A fully functional e-commerce website with Chapa payment integration. Features include product management, user cart, wishlist, order tracking, and secure payment processing. Built with Next.js for server-side rendering and optimized performance.

Netflix Clone

next.js next-auth tailwind the-movieDB

A full-stack web application to watch movie trailers using API from The Movie DB. Features include user authentication, movie browsing by categories, search functionality, and trailer playback. Implemented with Next.js for optimal performance and SEO.
